

Modul 1

Download – Install – Jalankan – Modifikasi

Download

- Download CodeIgniter di:

<https://codeigniter.com/>

The screenshot shows a Chromium browser window with the URL <https://codeigniter.com/download>. The page features the CodeIgniter logo and a navigation bar with links for Download, Documentation, Community, and Contribute. The main content area is divided into two sections: CodeIgniter 3.0 and CodeIgniter 2.x. The CodeIgniter 3.0 section states that version 3.0.1 is the current version and provides links to view the code on GitHub, download CodeIgniter 3.0.1, and download system message translations. The CodeIgniter 2.x section states that version 2.2.4 is the legacy version and provides links to view the code on GitHub and download CodeIgniter 2.2.4. The browser's address bar shows the URL, and the taskbar at the bottom displays several open files, including 'tgs1_metolid_....zip' and 'tugas metodel....zip'.

CodeIgniter Download Documentation Community Contribute

CodeIgniter comes in two main flavors: CodeIgniter 3.x and CodeIgniter 2.x

CodeIgniter 3.0

CodeIgniter 3.0.1 is the current version of the framework.

There have been a number of refinements since version 2.x, notably with the database, session handling and encryption. Development of this version is ongoing.

Note: The user guide download below is simply the zipped folder from the released version. It is included in the framework download.

[Download the system message translations](#)

CodeIgniter 2.x

CodeIgniter 2.2.4 is the legacy version of the framework.

The 2.x branch was originally released January 2011, the next major update (2.1.0) came in the fall of 2011, version (2.2.0) came out in July, 2014, and the current version (2.2.4) came out in August, 2015.

Install

- File hasil download:

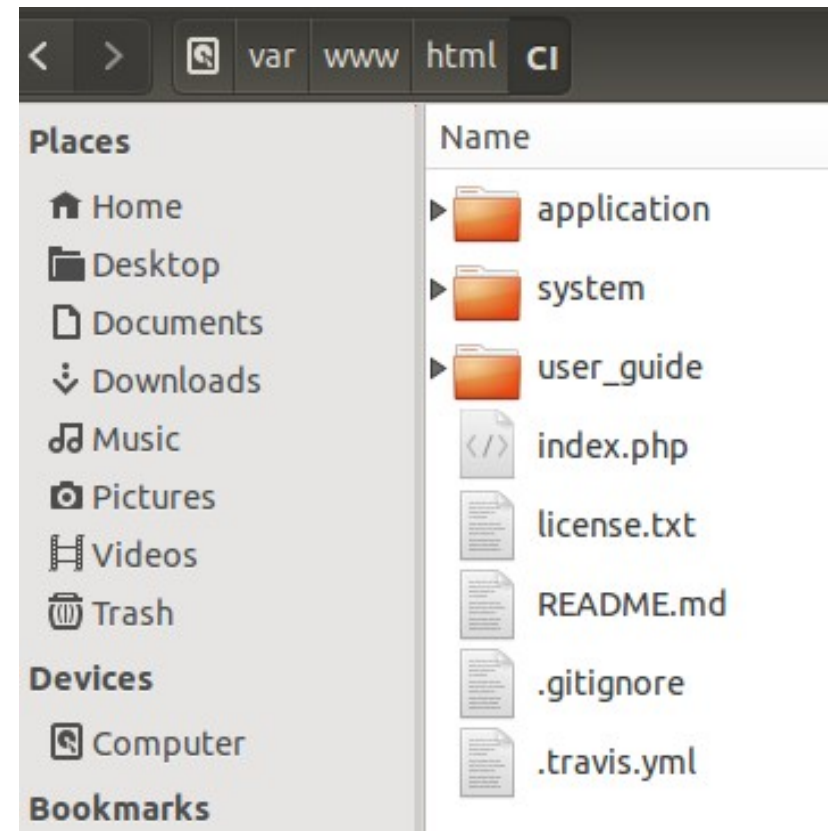

- Ekstrak ke folder:

C:\xampp\htdocs\CI

Atau

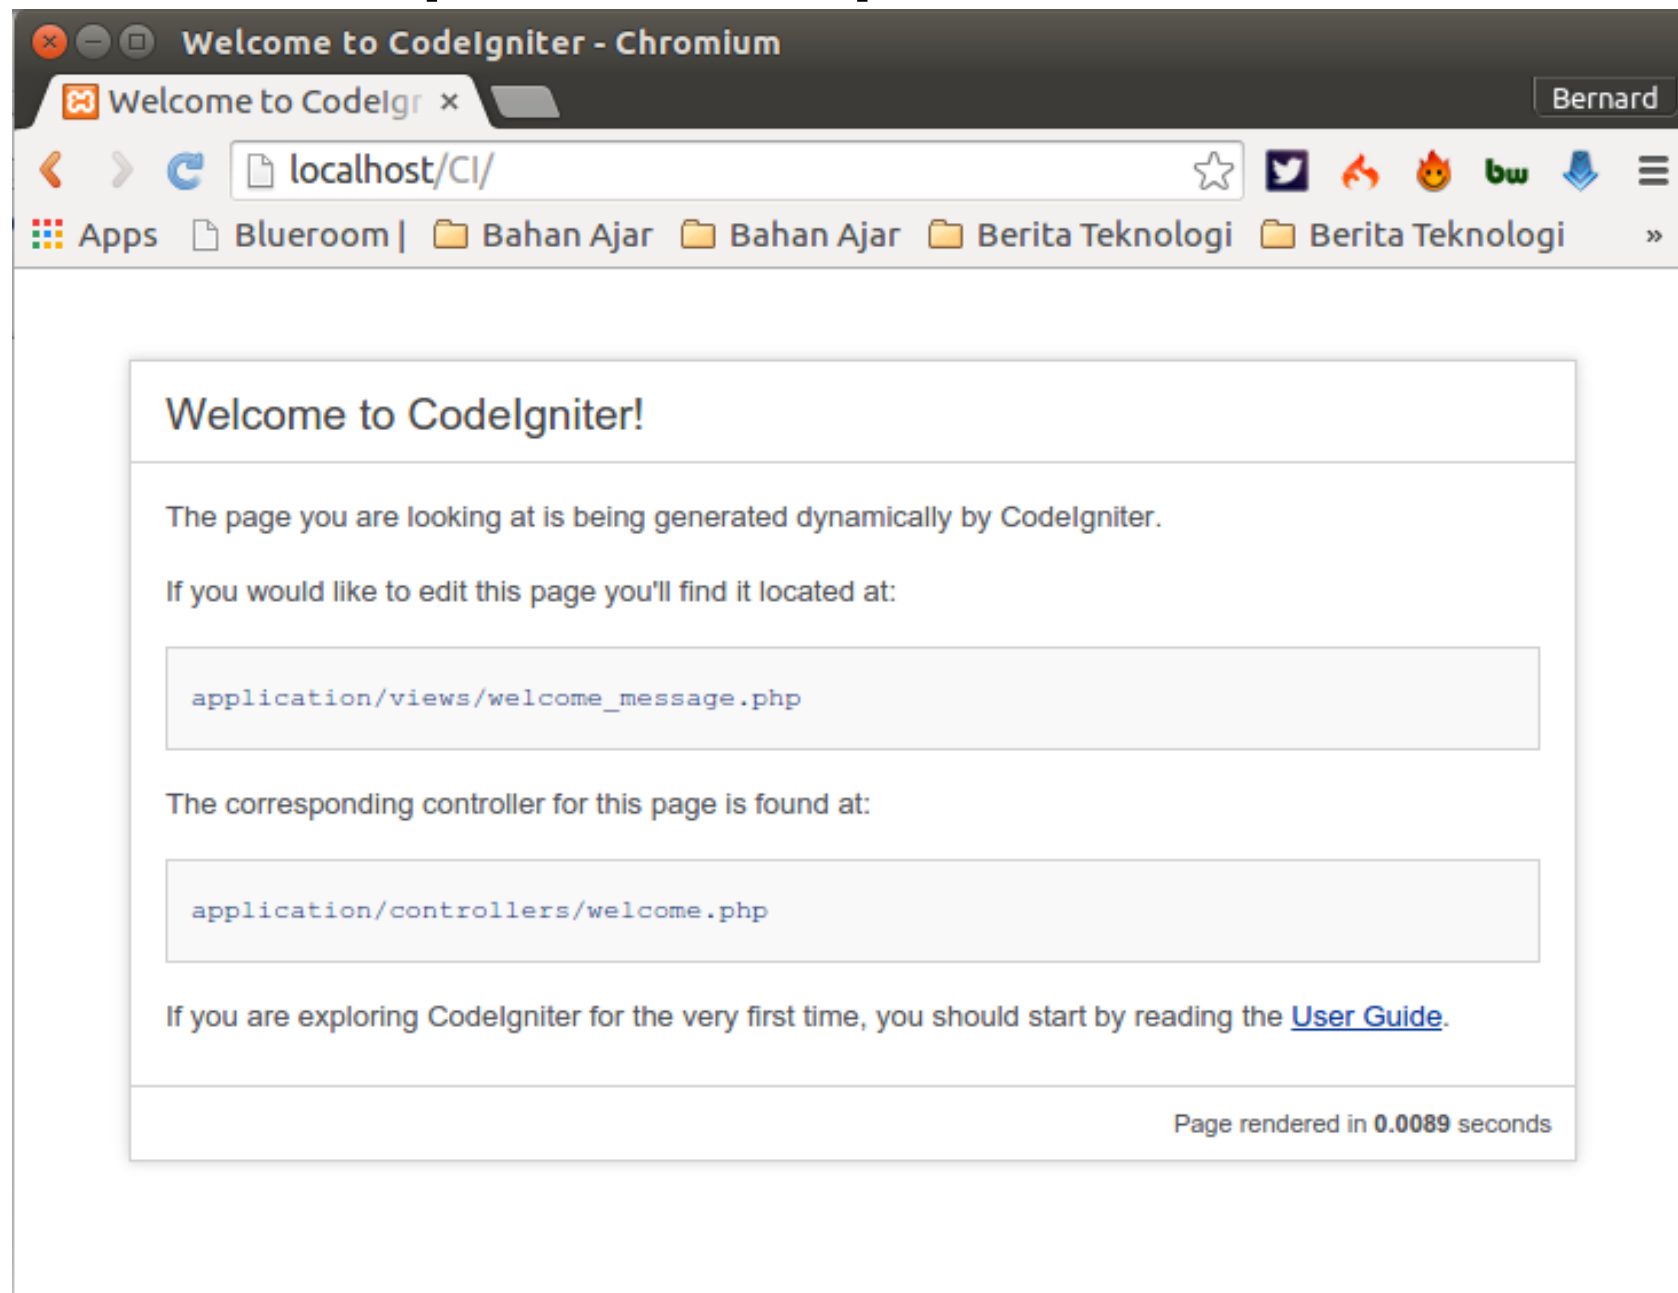

/var/www/html/CI

Jalankan

- Untuk pengguna linux jangan lupa ubah ijin akses folder CI di /var/www/html dengan perintah berikut:
 - `$chmod -R 755 /var/www/html/CI`
- Akses web melalui alamat:
 - `http://localhost/CI`

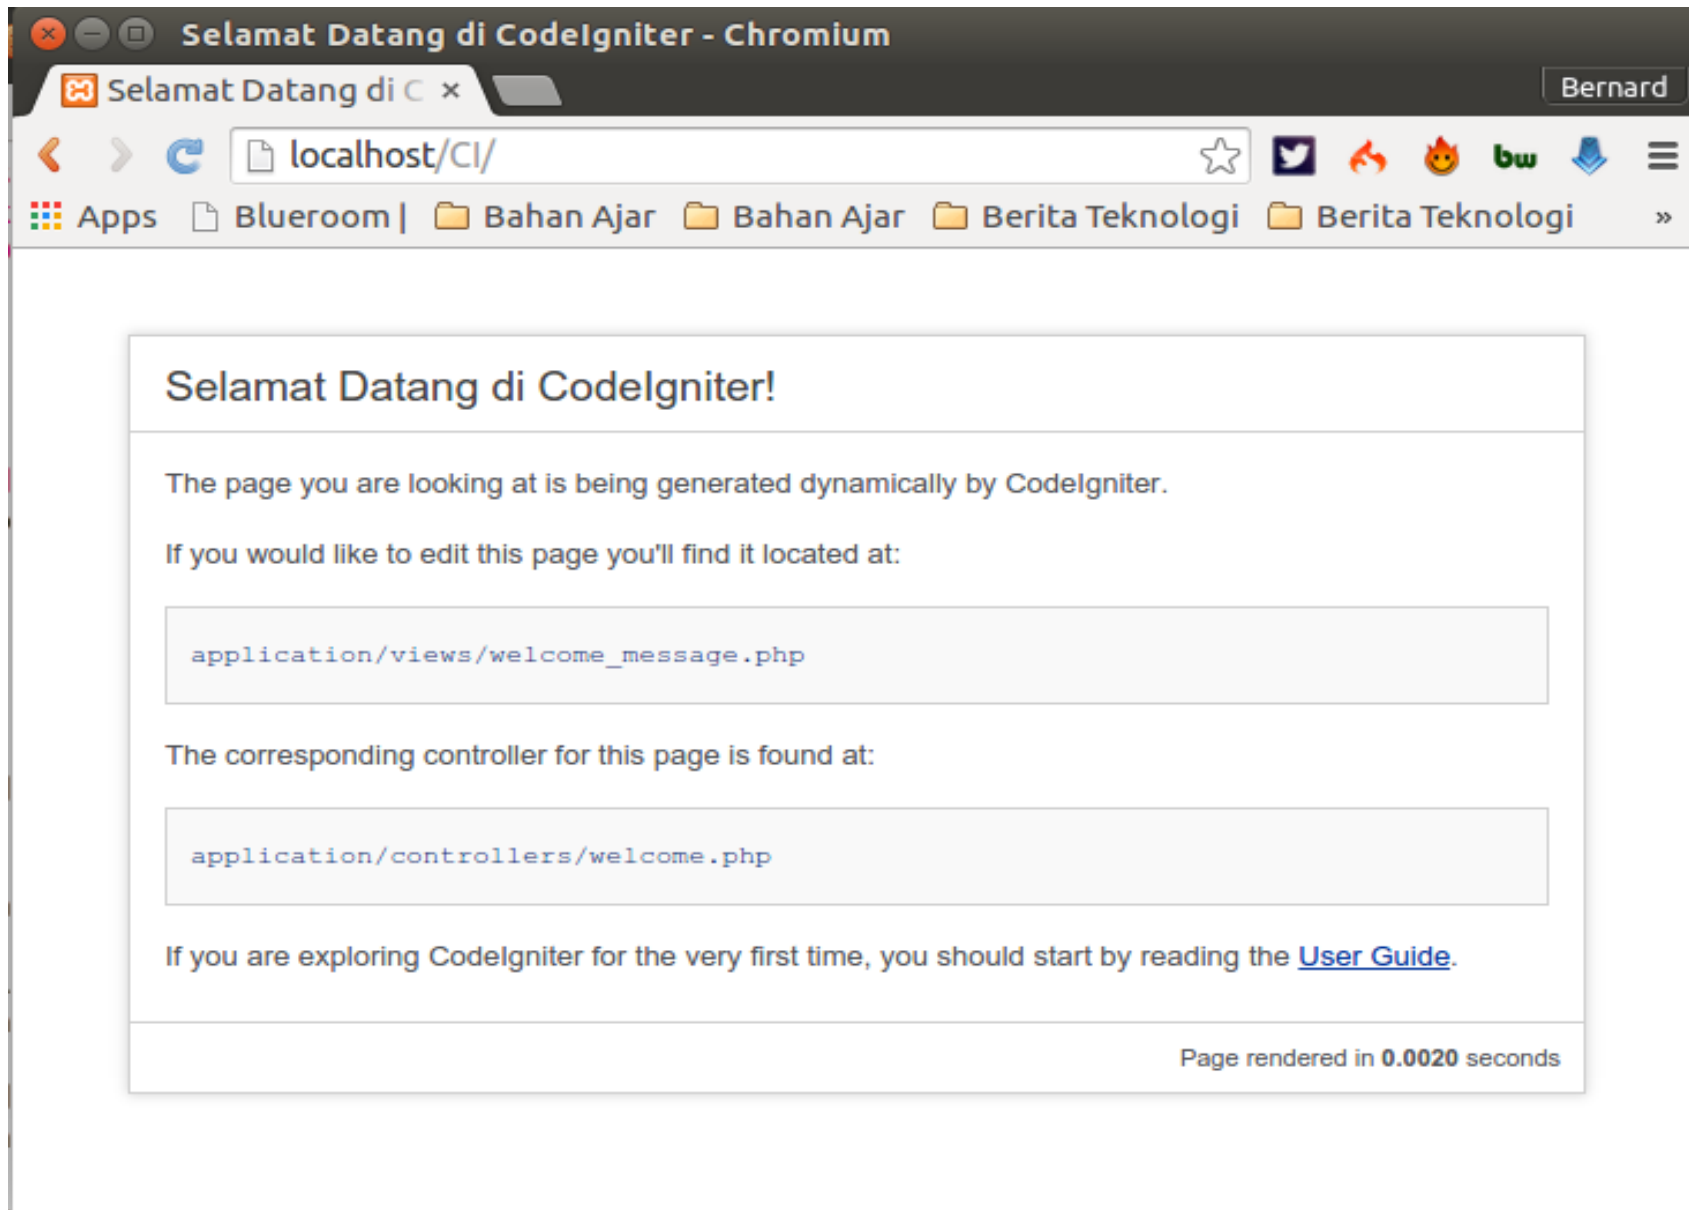

Tampilan CI pertama kali

Modifikasi [1]

- Buka file `welcome_message.php` yang ada di folder:
 - `Application/views/welcome_message.php`
- Lakukan edit pada isi file dengan merubah kata “Welcome to” menjadi “Selamat Datang di”.
- Simpan file
- Refresh halaman web CI dan lihat perubahan yang terjadi.

Hasil perubahan

Modifikasi [2]

- Buka file welcome.php yang ada di folder:
 - Application/controllers/welcome.php
- Lakukan edit pada isi file sbb:

```
public function index()  
{  
    $this->load->view('ftik');  
}
```

- Simpan file
- Refresh halaman web CI dan lihat perubahan yang terjadi. (*muncul error*)

Modifikasi [3]

- Buat file view “ftik.php” pada folder:
 - Application/views/ftik.php
- Lakukan edit pada isi file sbb:

```
<!DOCTYPE html>
<html>
  <head>
    <title>Fakultas TIK</title>
  </head>
  <body>
    <h1>Selamat Datang di Fakultas TIK</h1>
  </body>
</html>
```

- Simpan file
- Refresh halaman web CI dan lihat perubahan yang terjadi.

Modifikasi [6]

- Akses function baru “info” menggunakan alamat:

<http://localhost/CI/index.php/welcome/info/1>

controller

function

parameter

Modifikasi [4]

- Buat function baru “info” pada file controller “welcome.php” pada folder:
 - Application/controllers/welcome.php
- Lakukan edit pada isi file sbb:

```
public function index()
{
    $this->load->view('ftik');
}

public function info($progdi)
{
    $data["progdi"]=$progdi;
    $this->load->view('info',$data);
}
```

Modifikasi [5]

- Buat file baru “info.php” pada folder:
 - Application/views/info.php
- Lakukan edit pada isi file sbb:

```
<!DOCTYPE html>
<html>
    <head>
        <title>Info Mahasiswa</title>
    </head>
    <body>
        <h1>Saya adalah mahasiswa Program Studi:
        <?php
            if($progdi=="TI")
                echo "Teknik Informatika";
            elseif($progdi=="SI")
                echo "Sistem Informasi";
            elseif($progdi=="IK")
                echo "Ilmu Komunikasi";
            else
                echo "Tidak ada progdi tsb di fakultas TIK";
        ?>
        </h1>
    </body>
</html>
```

Modifikasi [6]

- Akses function baru “info” menggunakan alamat:

<http://localhost/CI/index.php/welcome/info/1>

controller

function

parameter
